

ABP - MesApp

Introduction:

Restaurant management tool, without Graphical Interface, with table and order selection, menus, reservation times, cash register.

Team group: 3 people

The application must be managed through text menus, with different options depending on the type of user (Management, waiters, customers).

Functions:

- Management:
 - User management, add/remove waiters and clientele • Reservation management • Extract daily billing • Create/modify/delete dishes
 - Waiter tasks
- Waiters
 - Assign / Reassign / Unassign tables to customers • Create menu orders
 - Check prices / supplements • List dishes • List tables • List table orders (Total price, to be divided...) • Create menus (Type 1, 2, 3... with 1st+dessert, 1st+2nd+dessert...) • Create / Modify order (Add / remove items / dishes) • Close / Mark as Paid/Non-modifiable order. • Customers:
 - Self-register • Reserve a table (Each table must be bookable in turns) • Allergens (Check with LDAP) • Limit the request for dishes according to allergens.

Technical operation:

- Computer Systems Module:
 - Contents: ÿ LDAP server ÿ BDD server (Postgres?) ÿ NFS server ÿ VPN server
- Use of services: ÿ LDAP - Management of users and app permissions ÿ BDD - Management of persistent data (Orders and dishes) from the app ÿ NFS - Centralization of directories
- Programming Module: • Contents:
 - ÿ Collections ÿ Reading / writing files ÿ Reading / writing BDD ÿ Conditional / iterative / exception structures • Functions:
 - ÿ Menu management per terminal according to the user ÿ Self-registration form ÿ Relational (PostgreSQL) and Non-relational (LDAP) BDD functions
- Development Environments: • Contents: ÿ Class diagrams ÿ Behavior diagrams ÿ Markup language documentation ÿ Version control
