

Activitat Streams

- Crea un directori de nom **IO**.
- Crea un *package* per cada exercici ubicat dins del directori **IO**.

1. FileReader i FileWriter

Package: **fileText**

Programs: **TextFileTest.java**, **TextFile.java**

Utilitza només les classes **FileReader** i **FileWriter**.

```
package fileText;
public class TextFileTest {
    public static void main(String[] args) {

        //Instantiate our TextFile

        //Read file thelittleprince.txt and print it to console

        //Count words of file thelittleprince.txt

        //Copy file thelittleprince.txt to a new file thelittleprince-copy.txt

        //write a sentence "This is the last line of the book. THE END" into a new file

    }
}
```

```
package fileText;
public class TextFile {
    /**
     * @param file: path of the file to read
     * @return String of the content of the file
     */
    public String readFile(String file) {
    }

    /**
     * @param file: path of the file to read
     * @return the number of chars of the file
     */
    public int countChars(String file) {
    }

    /**
     * @param text: text to add at the end of the file
     * @param file: path of the file to write
     */
    public void writeFile(String text, String file) {
    }

    /**
     * @param readfile: path of the file to read
     * @param writefile path of the file to write
     */
    public void copyFile(String readfile, String writefile) {
    }
}
```

2. FileInputStream i FileOutputStream

Package: **fileStream**

Programs: **FileStreamTest.java**, **ByteFile.java**

Utilitza només les classes **FileInputStream** i **FileOutputStream**.

```
package fileStream;
public class FileStreamTest {
    public static void main(String[] args) {

        //Read a text file thelittleprince.txt using a FileInputStream class

        //Read a file s.jpg using a FileInputStream class

        //Count Bytes of file thelittleprince.txt using a FileInputStream class

        //Count Bytes of s.jpg using a FileInputStream class

        //Copy File drawing.jpg to drawingcopy.jpg using a FileInputStream and FileOutputStream classes

    }
}
```

```
package fileStream;
public class ByteFile {
    /**
     * @param file: path of the file to read
     * @return String of the content of the file
     */
    public String readFile(String file) {
    }

    /**
     * @param file: path file to read
     * @return number of byte of file
     */
    public int countBytes(String file) {
    }

    /**
     * @param readfile: path file to read
     * @param writefile: path file to write
     */
    public void copyFile(String readfile, String writefile) {
    }
}
```
